

2015-2

Grade

1

実用英語技能検定

主催：公益財団法人 日本英語検定協会

後援：文部科学省

1 級

2015 年 10 月 11 日(日) 実施

■ 試験時間

筆記試験 (100分)

リスニングテスト (約37分)

■ 注意事項

1. 試験開始まで、この問題冊子を開いてはいけません。
2. 解答は、解答用紙（マークシート）に記入してください。
筆記 ・リスニングの解答欄は解答用紙のA面（表面）、筆記 の解答欄は、解答用紙のB面（裏面）にあります。解答用紙以外に記入した解答は、すべて無効となります。問題冊子にはメモをしてもかまいませんが、後で解答用紙に解答を書き写す時間はありません。
3. 問題内容に関する質問は一切受けつけません。
4. 不正行為をした場合は、答案は無効となります。
5. 他の受験者に迷惑をかける行為を禁じます。
6. リスニングテストの準備時間、およびリスニングテスト中に教室外へ出た場合は、その後教室に戻りテストを受けることはできません。
7. 携帯電話などは必ず電源を切って机の上に置き、絶対に使用しないでください。
8. 電子機器（ウェアラブル端末を含む）の使用を禁じます。
9. 携帯電話などの着信音・バイブ音、その他試験を妨げる音を発生させた場合は、失格とすることがあります。
10. 試験終了後、問題冊子は持ち帰ってください。
11. 採点結果等については、一切異議申し立てはできません。
12. この試験問題の複製（コピー）を禁じます。また、この試験問題の一部または全部を協会の許可なく他に伝えたり、漏えい（インターネット上に掲載することを含みます）することを禁じます。

A1-10-1058A

1

To complete each item, choose the best word or phrase from among the four choices. Then, on your answer sheet, find the number of the question and mark your answer.

- (1) As the country has very little () land, it has to rely on imported agricultural products to feed its population.
1 arable **2** ulterior **3** retractable **4** capricious
- (2) The pond near the town became () with mosquitoes. Town officials promised to take measures to solve the problem, as mosquitoes can spread dangerous diseases.
1 rustled **2** mitigated **3** infested **4** rectified
- (3) **A:** Bashir, should you really be driving on this dirt road in your new car?
B: It'll be OK. It has four-wheel drive, so it can handle rough ().
1 atrophy **2** concourse **3** sustenance **4** terrain
- (4) The politician's remark that the war was nearly impossible to win () his country's troops. They began to wonder what they were fighting for.
1 demoralized **2** implored **3** detested **4** immersed
- (5) Wins in the last two tournaments of the season () the professional golfer up from No. 56 to No. 7 in the world rankings.
1 incapacitated **2** catapulted **3** bewildered **4** deprecated
- (6) The isolated island community is known for its () language. Many forms of speech they use have now vanished from the rest of the country.
1 gallant **2** meager **3** archaic **4** irate
- (7) The () of smartphones on the market today makes it difficult for people to decide which one to purchase.
1 convalescence **2** profusion
3 treatise **4** annulment
- (8) In order to protect national security, details of antiterror operations are decided at () meetings unknown to all but a few key intelligence officials.
1 clandestine **2** abysmal **3** insipid **4** malignant
- (9) Driving a car while under the influence of alcohol is () by law. Those caught doing so face heavy fines and could have their license taken away.
1 dispersed **2** lamented **3** enlivened **4** proscribed

- (10) Stuart found studying Russian very () at first, but he began enjoying it once he was able to understand the basics.
 1 elastic 2 daunting 3 lustrous 4 sagacious
- (11) The manager () dismissed the request by one of his sales staff to be reassigned, refusing to discuss the matter at all.
 1 immortally 2 ponderously 3 brusquely 4 diversely
- (12) Dave receives a high salary but () most of it on long vacations and expensive restaurants. As a result, he has very little money in his savings account.
 1 impels 2 endows 3 inflicts 4 squanders
- (13) Business leaders () the government's plans to raise the consumption tax, arguing that such a move would send the economy into a recession.
 1 decried 2 deified 3 desensitized 4 deployed
- (14) Though smoking has been proven to be () to health, some consumers are still persuaded by tobacco-company ad campaigns that cigarettes are cool.
 1 tantamount 2 superfluous 3 detrimental 4 anecdotal
- (15) When questioned about the robbery, the suspect insisted he had worked alone. Fingerprint evidence, however, suggested he had had at least one ().
 1 tycoon 2 accomplice 3 paragon 4 partisan
- (16) Mateo and Suzie had been driving for hours on the highway in bad weather. Hoping to gain a brief () from the rain, they stopped at a roadside café.
 1 ruse 2 twinge 3 respite 4 zenith
- (17) Greg became so () in his book that he forgot all about the roast beef in the oven. By the time he remembered to take it out, it was already overcooked.
 1 notarized 2 engrossed 3 drenched 4 transposed
- (18) The city's downtown area used to be in bad shape, as most of its shops and businesses had moved elsewhere. Now, however, it is prospering again after being () by the city government.
 1 revitalized 2 relinquished 3 refrained 4 revoked

- (19) Although the mansion's barred windows and guard dogs are meant to be a () to intruders, last night someone managed to break in and steal some valuables.
1 revelation **2** deterrent **3** waiver **4** suppressant
- (20) During the televised debate, the politician became increasingly offended by the () remarks of his opponent, who kept making personal attacks.
1 acrid **2** scrumptious **3** mangled **4** soggy
- (21) Ron Green was a () scorer last season, getting a record 31 goals in the Super Soccer League. This year, however, he has been struggling to perform well.
1 satirical **2** tenuous **3** prolific **4** trifling
- (22) The moment the art critic walked into the gallery, one painting immediately () him. He knew right away that the artist who had painted it was a genius.
1 owned up to **2** picked up on
3 squared off against **4** leaped out at
- (23) Drake did not think the sales plan would work, but he had to () because it was his boss's idea. In the end, the plan failed despite everyone's hard work.
1 play along **2** count out **3** trade up **4** answer back
- (24) *A:* Honey, we need to () a date for our move. Moving companies charge more on the weekends, so a weekday would be better.
B: How about Monday the sixth? I can take that day off work.
1 shell out **2** pile on **3** drag out **4** fix on
- (25) The job candidate () the first interview, but he did badly in the second one, and eventually did not get the job.
1 sailed through **2** ran up
3 picked over **4** palmed off

Read each passage and choose the best word or phrase from among the four choices for each blank. Then, on your answer sheet, find the number of the question and mark your answer.

Land-Use Regulations

Megalopolises such as London and New York are infamous for their exorbitant land prices. In London's exclusive Mayfair district, for example, residential property goes for as much as \$82,000 per square meter. Such astounding prices are said to reflect extreme scarcity of supply in the face of overwhelming demand. Some economists, however, believe that (26). In the early twentieth century, many local governments in cities began implementing land-use regulations restricting the size and type of buildings that could be constructed, in order to protect homeowners from the noise and pollution associated with industry and business. Economists such as Christian Hilber of the London School of Economics argue it is these laws that drive up land prices to outrageous levels, as there is nowhere to construct buildings that could create competition and lower prices.

According to Randal O'Toole, a senior fellow at the Cato Institute think tank in Washington, DC, land-use regulations also have the effect of (27). O'Toole believes that increasing land-use regulation has caused a shift in U.S. migration patterns. Prior to this, urban metropolises were attractive destinations for people in search of a better life. But by raising land prices in areas where good jobs and promising locations for starting businesses are plentiful, land-use regulations have locked poorer people in less desirable neighborhoods, where land is more affordable. Despite the lack of economic opportunity in these neighborhoods, people simply would not be able to make ends meet in areas where rent would eat up a huge percentage of their paychecks.

Some economists argue a solution to the land-use regulation problem would be to make decisions from the top down. They have shown that politicians in local districts tend to be influenced by property owners to implement laws that protect quality of life in their neighborhoods and, as a consequence, ensure the value of their property does not go down. When land-use regulations are drawn up at a local level, therefore, they (28). If decisions were instead made at the city level, the priority would be on benefiting the city as a whole, rather than individual neighborhoods.

-
- (26) 1 the high prices benefit the economy
 2 prices will soon begin to decrease
 3 the shortage is artificially created
 4 this has no effect on homeowners
- (27) 1 limiting social mobility 2 harming the construction industry
 3 making businesses lose money 4 raising rents in poor neighborhoods
- (28) 1 lead to lower land prices 2 are changed more frequently
 3 tend to be much stricter 4 often violate national laws

The Origin of Milk Consumption

Today, lactose intolerance is a relatively minor yet widespread health problem that causes some people to experience symptoms such as diarrhea or vomiting after consuming dairy products. The condition is due to the lack of the lactase persistence (LP) allele, a gene that allows the body to digest lactose, the main sugar in milk. Though widespread in Europe, the allele is much less common in other regions. Interestingly, research conducted by evolutionary geneticist Mark Thomas of University College London has shown that the genetic mutation which gave rise to the LP allele had a significant impact on human settlement in Europe.

Thomas examined the skeletons of some of Europe's first farmers, who lived around 7,500 years ago, and his findings indicate that the allele (**29**). These early agriculturalists had spread gradually from the Middle East and competed with European hunter-gatherer populations. The skeletons examined by Thomas were primarily crop farmers, but within a relatively short timespan, the LP allele's emergence—and the resulting newfound ability to consume fresh milk without negative consequences—would lead to increased cattle farming and bestow a major survival advantage. Today, the allele is found in about 90 percent of northern Europeans.

The specific nature of the competitive advantage gained from drinking milk, however, remains something of a mystery. Thomas speculates lactose tolerance led to (**30**). Europe's shorter growing season may have made the crops upon which farmers had originally depended more difficult to cultivate. Obtaining calories from milk therefore meant a potential relief from the boom-and-bust cycle of crop-based agriculture. The risk associated with intermittent crop failures would have been substantially lessened by the ability to obtain nutrients elsewhere.

It is also likely that, during famines, desperation would have forced the lactose intolerant to consume dairy products. Such individuals, however, would have (**31**). People who lived through the famine, therefore, would be highly likely to possess the LP allele because the effects of lactose intolerance would have caused already malnourished people to perish. Additionally, researchers estimate LP-allele carriers would have produced up to 19 percent more offspring overall. Over multiple generations, this probably helped people with the allele dominate northern Europe.

-
- | | | |
|------|---|---|
| (29) | 1 served a different purpose then | 2 had not yet come into existence |
| | 3 slowed down human migration | 4 originated in hunter-gatherer groups |
| (30) | 1 further genetic mutations | |
| | 2 exploration of new regions | |
| | 3 improved crop-farming techniques | |
| | 4 a more stable food supply | |
| (31) | 1 been healthier to begin with | 2 gotten certain benefits from milk |
| | 3 had little chance of survival | 4 had no need for the LP allele |

Read each passage and choose the best answer from among the four choices for each question. Then, on your answer sheet, find the number of the question and mark your answer.

The Fur Trade

Throughout the 1500s, Europeans saw the part of the New World that is now eastern Canada and the northeastern United States as little more than a rich fishing ground. But when the demand for beaver pelts skyrocketed in response to the rising popularity of beaver-fur hats, Europeans began to venture inland, opening the way for the exploration of North America. By the time beaver hats went out of fashion in the mid-1800s, the fur trade had opened up large areas of North America to European settlement and altered indigenous ways of life irrevocably.

Early on, mutual suspicions between Europeans and native peoples had frequently resulted in bloody encounters, with the former regarding the latter as savages whose way of life and technology were hopelessly primitive. When French explorer Samuel de Champlain began organizing expeditions into what is now Quebec in search of beaver pelts in the early 1600s, however, the French were forced to rethink their notions of superiority. The lightweight, easily maneuverable native canoes, for example, were far better suited than unwieldy European boats to the swift, rapids-filled rivers that served as the main transportation arteries. The French had little choice but to rely on the indigenous inhabitants to help them navigate the wilderness. Although the latter were wary of French motives and suspicious of the Christian missionaries who accompanied the fur traders, Champlain managed to smooth over past differences and establish an amicable relationship with the Huron and Algonquin peoples, trading cloth and metal goods with them in exchange for furs and fresh meat.

At the same time, the Dutch, who were colonizing present-day New York State, began to make overtures to indigenous peoples as well, offering them firearms in return for access to furs. They allied with a confederation of tribes known as the Iroquois, who competed with the Huron and Algonquin for territory. Alliances and rivalries between native groups began to be influenced by European actions. In an effort to secure France's status as a military and trade partner of the Huron, for example, Champlain and nine of his men accompanied a Huron war party on an incursion into Iroquois territory. Such outside interference, along with heightened competition for fur-hunting territory, eventually led to the Beaver Wars, a series of intertribal conflicts during the mid- to late 1600s that contributed to the annihilation of entire tribes and mass migrations of indigenous peoples.

The involvement of native peoples in the fur trade, and its effect on their way of living, exemplified an economic phenomenon known as the "tragedy of the commons." As their desire for European goods caused them to devote increasing time and resources to the fur trade, native peoples abandoned traditional hunting and survival skills. With increasing competition and declining beaver stocks, hunters felt compelled to acquire as many pelts as possible before their rivals could, even though this meant the probable extermination of the beaver. The result was a vicious cycle that led to the ultimate devastation of both native peoples and the animal that was their livelihood.

(32)

What happened when the French began exploring the North American interior?

- 1 Native peoples who desired European goods convinced Europeans to shift their business interests from fishing to the fur trade.
- 2 Missionaries who believed that trading with native peoples went against their religion tried to block French efforts to seek help from native tribes.
- 3 The failure of diplomatic exchanges, as well as conflict over transportation routes, increased tensions between native peoples and the French.
- 4 The discovery that their technology was poorly suited to the new environment led the French to change their attitude toward native peoples.

(33)

In their settlement of North America, the Dutch and the French

- 1 were so concerned with competing against each other they failed to realize indigenous groups were becoming their competitors in the fur trade.
- 2 wanted to trade with distant indigenous groups directly, so they drove out those who were acting as middlemen in the sale of beaver furs.
- 3 became involved in disputes among native tribes, worsening relations among them and ultimately destabilizing their societies.
- 4 abandoned their attempts to go into Iroquois territory in search of beaver furs because of frequent and violent conflicts between native tribes.

(34)

What does the author of the passage cite as an example of the “tragedy of the commons”?

- 1 Europeans warning native peoples to conserve natural resources only so they themselves could have greater access to those same resources.
- 2 Europeans disregarding traditional native customs that limited the number of beavers a person could hunt each year.
- 3 Native peoples acting in a manner that gained them short-term benefits but negatively affected their collective long-term interests.
- 4 Native peoples acquiring so many beaver furs that the prices they were able to obtain for them declined greatly.

Robotic Surgery

Robotic surgery, in which a surgeon manipulates controllers connected to precision instruments that have been inserted into a patient's body, has been lauded for its efficiency and minimal invasiveness. Advocates contend surgical robots can perform procedures in compact spaces such as the abdominal cavity with smaller incisions, less tissue damage, and quicker recovery time than traditional techniques. For a few specific operations, robotic surgery has become the industry standard. Furthermore, there was a 400 percent increase in the number of robotic surgeries between 2007 and 2011, and the technology continues to spread.

Robotic surgery systems represent a considerable investment for a hospital. The initial outlay can exceed \$2 million, with additional charges for surgical instruments, which require regular replacement and maintenance. Hospitals are increasingly promoting the devices in a bid to attract patients and thereby compensate for their expenditures. A 2011 Johns Hopkins University study found that 89 percent of U.S. healthcare facilities that used robotic surgery systems promoted the superiority of surgical robots over traditional surgical techniques on their websites, and 32 percent of the facilities claimed the devices produced improved outcomes in cancer surgeries—assertions for which the study's authors say clear evidence is lacking. There are also indications that manufacturers are pressuring hospitals to increase the number of robotic surgeries they perform in order to profit from sales of replacement instruments. "I think a lot of the uptick in robotic surgery is being driven by marketing and not by evidence-based medicine," says Dr. Jason D. Wright, a surgeon at Columbia University Medical Center, who has criticized the overuse of the devices.

Compounding the issue are studies indicating that robotic systems can lead to complications due to equipment failures and a lack of training for surgeons. According to U.S. Food and Drug Administration (FDA) records, at least 245 serious complications, including 71 deaths, have been attributed to the devices since 2000. Manufacturers counter that these numbers merely reflect the increased use of the systems and are statistically insignificant in the context of the 1.5 million robotic surgeries carried out since the technology was first implemented. However, Dr. Diana Zuckerman, president of the National Center for Health Research, believes the FDA reports are just "the tip of the iceberg." She concluded this after examining studies that cross-referenced the FDA database with news articles about robotic surgery mishaps and found major discrepancies: numerous incidents cited in media coverage and lawsuits were missing from the database.

The controversy surrounding robotic surgery has spurred scientists to rethink its role. They are developing a new generation of robots to independently perform low-level surgical procedures, such as removing diseased tissue, taking advantage of their precise movements and sophisticated software. As robots perform such repetitive tasks more accurately than humans, transferring these jobs would not only reduce errors but could free up human surgeons, who are in heavy demand, for more-complicated procedures. Whether they are performing surgeries or assisting with them, it seems that, if the safety issues can be addressed satisfactorily, robots will continue to play a significant role in healthcare in the years to come.

(35)

Based on the findings of the Johns Hopkins University study, it seems likely that

- 1** the success of surgical robots in cancer surgery has led hospitals to use them in other types of operations where they may not be appropriate.
- 2** surgical robot manufacturers have been attempting to justify the high prices of the instruments they make by claiming that they rarely need to be replaced.
- 3** the vast majority of healthcare facilities that perform robotic surgeries spend so much on the devices that their budgets have to be cut in other areas.
- 4** hospitals have made false or exaggerated claims in advertisements in order to recover the high costs associated with surgical robots.

(36)

What does Diana Zuckerman believe is true of robotic surgery?

- 1** Researchers involved in past safety studies should have taken into account the increasing popularity of robotic surgery when they analyzed their findings.
- 2** There is a high probability that robotic surgery is more dangerous to patients than is indicated by the FDA data that has been reported.
- 3** The rapidly increasing number of robotic surgeries being performed is leading patients to request them even when they are not appropriate.
- 4** The high number of lawsuits and news reports centered on robotic surgery has resulted in the FDA having an overly negative image of it.

(37)

What is true of the surgical robots currently under development?

- 1** Because their work will be more straightforward, they are less likely to cause the type of problems that current robots have been associated with.
- 2** Advances in software will enable them to perform complicated surgeries more safely than the previous generation of robots could.
- 3** The fact that they will enable surgeons to work with fewer human assistants means the number of errors committed in the operating room will drop.
- 4** They are being designed to carry out long, complicated operations that human surgeons lack the stamina and control to perform.

Ronald Reagan's Foreign Policy and the Iran-Contra Scandal

During the 1980s, at the height of the Cold War between the United States and the Soviet Union, then U.S. president Ronald Reagan brought about a radical change in his nation's foreign policy. Earlier presidents had sought to counter the worldwide spread of communism through a policy of "containment," in which they provided various forms of aid in order to help other countries resist communist expansion. Reagan, fearful of the Soviets' growing influence, particularly in the developing world, instead implemented a "rollback" policy aimed at actively turning nations away from communism by overthrowing their governments.

Reagan's top military and diplomatic officials, as well as many U.S. conservatives, embraced the rollback doctrine not only because they felt a moral duty to defeat communism, but because it did not require the in-

volvement of the U.S. military and could be carried out for a relatively low cost.

Reagan's strategy ran into trouble, however, in the Central American nation of Nicaragua. In 1981, Reagan authorized the Central Intelligence Agency (CIA) to arm and train a group of right-wing Nicaraguan rebels, the Contras. This group was engaged in a brutal guerrilla war against the democratically elected Sandinista government, whose socialist reforms and expansion of the military were interpreted as a threat to U.S. interests. The CIA consequently began funding military operations in Nicaragua without prior Congressional authorization. These drew condemnation from both the U.S. Congress and the international community when word of them leaked out. The controversy was intensified by well-documented atrocities committed by Contra forces against the civilian popula-

tion. Congress reacted by passing legislation limiting, and finally prohibiting, direct assistance to the Contras.

The Reagan administration responded with a "public diplomacy" strategy aimed at manipulating domestic public sentiment. It hired private-sector firms to attack anti-Contra lawmakers through television and newspaper advertisements, secretly sponsored pro-Contra newspaper editorials, and pressured journalists to favor the Contras in their coverage of Nicaraguan affairs. It also targeted activist groups who were drawing attention to Contra atrocities, subjecting them to CIA investigations and harassment. The campaign is perhaps the least known, and most disturbing, legacy of Reagan's time in office. According to journalists Robert Parry and Peter Kornbluh, the administration initiated "a set of domestic political operations comparable to what the CIA conducts

(38)

Ronald Reagan received support for his "rollback" policy because

- 1 demonstrating the immorality of communism was thought more likely to be effective than using methods such as military or economic aid.
- 2 the success of the containment policy had shown that the time was right to influence the policies of developing countries as well.
- 3 people believed it would enable him to reduce communist influence in a cost-effective way and without directly committing U.S. armed forces.
- 4 it was clear that the containment policy had been too extreme in its efforts to turn nations away from communism.

(39)

Why was Reagan's "public diplomacy" strategy criticized by some?

- 1 It risked the lives of American journalists and CIA operatives who were operating in Nicaragua.
- 2 It encouraged the Contras to use violent tactics as a way to weaken the Nicaraguan government's authority.
- 3 It involved cooperating with private-sector firms that had previously been involved in political scandals in the United States.
- 4 It employed undemocratic strategies such as using propaganda and limiting free expression to influence opinion in the United States.

against hostile forces abroad.”

Administration officials also instructed Lieutenant Colonel Oliver North of the National Security Council (NSC) to arrange military assistance to the Contras in defiance of the legislative ban. Faced with the dilemma of how to finance the scheme, North came up with the idea of using profits from another illegal operation, the sale of arms to Iran, a nation that was subject to an international arms embargo at the time. These weapons were being sold in a bid to free U.S. hostages held in Lebanon by a militant group with Iranian ties. North commenced funneling money to the Contras through a third party in order to get around the legal restrictions.

When the story first broke in 1986, Reagan admitted Iran had received U.S. weapons but denied the arms were a direct exchange for hostages. For his part, North stated that he had diverted funds

from arms sales to assist the Contras with the approval of his NSC superiors, and, he presumed, the president.

Due to the resulting media uproar, various investigations, including a presidential commission and a Congressional hearing, were held. The commission faulted Reagan for failing to properly oversee his subordinates but found no evidence linking him to the activities of North or the NSC. The Congressional report was harsher, stating that the administration, through secrecy and deception, had shown “disdain for the law.” It also said Reagan himself bore the “ultimate responsibility” because the Constitution requires that the president “take care that the laws be faithfully executed,” a role that includes ensuring his subordinates are aware of their duty to uphold the law.

In spite of these findings, only six NSC and CIA figures were

convicted of crimes; two had their convictions dismissed, and the rest were later pardoned. Many key figures in the scandal, including then vice president George Bush, went on to higher positions of power in the government. Thanks perhaps to Reagan’s candid acknowledgment of his lack of oversight, as well as his skillful handling of the press, the Iran-Contra scandal quickly faded from public memory. This dismayed experts like political analyst Theodore Draper, who believed it was much more than a simple scandal, seeing it rather as a threat to the Constitution and the rule of law. He wrote that if the story of the scandal “is not fully known and understood, a similar usurpation of power by a small strategically placed group within the government may well recur before we are prepared to recognize what is happening.”

(40)

According to the findings of the Congressional hearing,

- 1 NSC staff members such as Oliver North should not have ignored Reagan’s instructions to keep him informed of efforts to free U.S. hostages.
- 2 Reagan was to blame for members of his administration ignoring laws that prohibited the government from funding the Contras’ activities.
- 3 the CIA should not have tried to cover up attempts by the NSC to illegally sell weapons to the Contras.
- 4 Congress should have done more to prevent Reagan from promoting laws that were in violation of the Constitution.

(41)

What is Theodore Draper’s view of the Iran-Contra scandal?

- 1 It was a message to politicians that if they hoped to reach the highest levels of power, they could benefit by deceiving the press.
- 2 It was a clear example of top members of the U.S. government abusing their power in order to gain personal profit.
- 3 It demonstrated the tendency of the Reagan administration to ignore the crimes of officials who had been involved in scandals.
- 4 It should be a lesson to the American people on the need to prevent members of government from expanding and abusing their power.

4

English Composition

- Write an essay on the given TOPIC covering three of the POINTS below.
- Structure: Three or more paragraphs, including an introduction and conclusion
- Length: Around 200 words
- Write your essay in the space provided on Side B of your answer sheet.
Any writing outside the space will not be graded.

TOPIC

Can international terrorism ever be eliminated?

POINTS

- *Economic inequality*
- *Education*
- *Financial costs*
- *Historical background*
- *International relations*
- *Military action*

MEMO

Listening Test

There are four parts to this listening test.

Part 1	Dialogues: 1 question each	Multiple-choice
Part 2	Passages: 2 questions each	Multiple-choice
Part 3	Real-Life: 1 question each	Multiple-choice
Part 4	Interview: 2 questions	Multiple-choice

※ Listen carefully to the instructions.

Part 1

- No. 1**
- 1** He does not want to work for Margaret.
 - 2** He felt he deserveded to be promoted.
 - 3** He lost his job to Margaret.
 - 4** The woman refused to show him the memo.
- No. 2**
- 1** The seminar she attended was a waste of time.
 - 2** She could not complete the business deal.
 - 3** The electronics firm will not negotiate the price.
 - 4** Her ability to negotiate has improved recently.
- No. 3**
- 1** The man will not let the woman buy the product.
 - 2** The man is doubtful of the advertisement's claims.
 - 3** The woman's father has the same product.
 - 4** The woman prefers to shop at regular stores.
- No. 4**
- 1** Stay away from Maggie's house.
 - 2** Talk to Maggie about her dog.
 - 3** Ask Maggie to buy her some shoes.
 - 4** Avoid confronting Maggie.

- No. 5**
- 1** He only has 10,000 miles in his account.
 - 2** He can upgrade on certain flights.
 - 3** He needs to use his upgrade by March 30.
 - 4** He can take an international flight.
- No. 6**
- 1** Think about spending more on traveling.
 - 2** Be more cautious with their investments.
 - 3** Consider the idea of buying a second home.
 - 4** Ask the Dawsons for advice about second homes.
- No. 7**
- 1** He does not feel competent yet.
 - 2** His clients at RCB are dissatisfied.
 - 3** He is not used to having tight deadlines.
 - 4** He does not think RCB's products will sell.
- No. 8**
- 1** The number of people likely to be unemployed.
 - 2** The opinions they have regarding their jobs.
 - 3** The duration of the economic recovery.
 - 4** The value of the jobs being created.
- No. 9**
- 1** They cost too much to invest in now.
 - 2** They tend to require a lot of maintenance.
 - 3** They are unlikely to generate the power the couple needs.
 - 4** They are less cost-effective than putting in extra insulation.
- No. 10**
- 1** The agencies have found some ideal candidates.
 - 2** Dan should lower his expectations.
 - 3** Philip Johnson's sales record is not outstanding.
 - 4** Dan should make the final hiring decision.

Listening Test

Part 2

- (A)** **No. 11**
- 1** Moderate exercise has little effect on overall health.
 - 2** Short, intense workouts can improve fitness.
 - 3** Americans exercise more than official figures show.
 - 4** High-intensity workouts are becoming less popular.

- No. 12**
- 1** Its long-term effectiveness is uncertain.
 - 2** It is more likely to benefit women and older people.
 - 3** The official guidance about it is too vague.
 - 4** It has been shown to cause injuries.

-
- (B)** **No. 13**
- 1** Bees will not take nectar that has a negative charge.
 - 2** Bees use electrical fields to find nectar.
 - 3** Flowers of a certain color attract more bees.
 - 4** Positive charges are harmful to bees' health.

- No. 14**
- 1** The bees had trouble finding the right disks.
 - 2** The bees consumed more sugar water.
 - 3** The bees produced stronger electrical charges.
 - 4** The bees' sensory ability improved.

- (C)** **No. 15** **1** New laws regarding blogging are necessary.
2 The politician had no right to meet her accuser.
3 An online accusation harmed the politician's image.
4 The news blog should compensate the reader.
