

2016-1

Grade

1

実用英語技能検定

主催：公益財団法人 日本英語検定協会

後援：文部科学省

1 級

2016 年 6 月 12 日(日) 実施

■ 試験時間

筆記試験 (100分)

リスニングテスト (約34分)

■ 注意事項

1. 試験開始まで、この問題冊子を開いてはいけません。
2. 解答は、解答用紙（マークシート）に記入してください。
筆記 ・リスニングの解答欄は解答用紙のA面（表面）、筆記 の解答欄は、解答用紙のB面（裏面）にあります。解答用紙以外に記入した解答は、すべて無効となります。問題冊子にはメモをしてもかまいませんが、後で解答用紙に解答を書き写す時間はありません。
3. 問題内容に関する質問は一切受けつけません。
4. 不正行為をした場合は、答案は無効となります。
5. 他の受験者に迷惑をかける行為を禁じます。
6. リスニングテストの準備時間、およびリスニングテスト中に教室外へ出た場合は、その後教室に戻りテストを受けることはできません。
7. 携帯電話などは必ず電源を切って机の上に置き、絶対に使用しないでください。
8. 電子機器（ウェアラブル端末を含む）の使用を禁じます。
9. 携帯電話などの着信音・バイブ音、その他試験を妨げる音を発生させた場合は、失格とすることがあります。
10. 試験終了後、問題冊子は持ち帰ってください。
11. 採点結果等については、一切異議申し立てはできません。
12. この試験問題の複製（コピー）を禁じます。また、この試験問題の一部または全部を協会の許可なく他に伝えたり、漏えい（インターネット上に掲載することを含みます）することを禁じます。

1

To complete each item, choose the best word or phrase from among the four choices. Then, on your answer sheet, find the number of the question and mark your answer.

- (1) The police officer stopped the man and gave him an alcohol breath test because he was driving his motorcycle very ().
1 erratically **2** cordially **3** scrupulously **4** deftly
- (2) The professor warned his students not to submit essays copied from the Internet, as such () would get them expelled from the university.
1 invective **2** introversion **3** plagiarism **4** stratification
- (3) *A:* Do you know what the boss is planning to say at the shareholders' meeting?
B: If I could () you, I would, but he hasn't said anything to me about the matter.
1 glamorize **2** idolize **3** hasten **4** enlighten
- (4) Alice and Charles thought their new plum tree would not survive the hot, dry summer, but it proved to be more () than they had expected.
1 verbose **2** impertinent **3** malicious **4** robust
- (5) *A:* Are you looking forward to visiting Brazil, Setsuko?
B: Yes, but I don't () the thought of the journey. Twenty-four hours on an airplane won't be much fun.
1 relish **2** fete **3** torment **4** jeer
- (6) By the time firefighters arrived at the family's home, it was completely (). Although no one was hurt, the house could not be saved.
1 jovial **2** ablaze **3** paltry **4** aloof
- (7) Bill attends an elite university, so his professors are among the most () people in their fields. He feels honored to be taught by such highly respected scholars.
1 volatile **2** eminent **3** assailable **4** repugnant
- (8) The police formed a () in front of the government building to stop the angry protesters from entering and physically attacking the president.
1 shoal **2** hoax **3** gorge **4** cordon
- (9) When the king's daughter married the prince of a neighboring country, the king said, "This () occasion represents the union of two nations!"
1 copious **2** momentous **3** voracious **4** extraneous

- (10) **A:** Do I really have to stay in the hospital another night, Doctor?
B: Unfortunately, yes. There seems to be an () in your blood test results, Mr. Peters. I'd like to do more tests to find out what the problem is.
1 insurrection **2** anomaly **3** increment **4** oracle
- (11) When the war memorial was completed, a ceremony was held to () it to the memory of the soldiers who had given their lives for their country.
1 encapsulate **2** consecrate **3** envelop **4** conscript
- (12) After () in prison for 20 years, Jake was finally released. He greatly regretted both his crime and the years of his life that had been wasted because of it.
1 languishing **2** gargling **3** lurching **4** disembarking
- (13) The new chief editor told her staff it was time to () the fashion magazine to win back readers. "The new look should be bold and stylish," she said.
1 rebuff **2** revile **3** revamp **4** retard
- (14) **A:** Wilson, if I fall asleep during the principal's speech, will you give me a () to wake me up?
B: Sure, Sofia. But only if I don't fall asleep as well!
1 ledge **2** stitch **3** pitch **4** nudge
- (15) After several people died from taking the new flu medication, it was banned by the government. It turns out the medication can be () if taken with certain other drugs.
1 vexing **2** covetous **3** lethal **4** unequivocal
- (16) This travel guide for Hawaii has information on a wide range of accommodations, from the most () resort hotels to basic discount motels.
1 jaded **2** foolhardy **3** opulent **4** plaintive
- (17) More than 260 awards, including the Nobel Peace Prize, were () on Nelson Mandela for his work in fighting racial discrimination in South Africa.
1 bestowed **2** exonerated **3** pollinated **4** masqueraded
- (18) Allen knew his comic book collection would someday be valuable, so he kept it in () condition, refusing to let anyone touch it.
1 unwitting **2** debonair **3** poignant **4** pristine

- (19) In exchange for acting as a witness against his former crime boss, the gangster was granted () from prosecution and allowed to go free.
1 immunity 2 undertone 3 turmoil 4 transgression
- (20) Although western Colorado is usually quite dry throughout the summer, the amount of () this year has been unusually high.
1 voltage 2 precipitation 3 leverage 4 annexation
- (21) “It is the courage and selflessness () by fine soldiers like you that form the core of our national spirit,” the general told the troops at the victory parade.
1 rankled 2 trudged 3 exemplified 4 exasperated
- (22) After ignoring his work for most of the semester, Enrique () and studied hard for the last two weeks. It was too late, though, and he received poor grades.
1 buckled down 2 polished off
3 ironed out 4 flaked off
- (23) While the other runners went as fast as possible from the start of the race, Tom () and waited. Then, when the others were tired, he ran at full speed and passed them.
1 hung back 2 rode on 3 beefed up 4 roped in
- (24) A: What do you think of my idea for a TV commercial, Hank?
B: Well, it would be a lot of work. You’d better () the manager to see what he thinks about starting such a big project.
1 pine for 2 cave in 3 bunch up 4 sound out
- (25) The new employee stayed at the office very late working on the report he had been asked to write. He did not want to () his first chance to impress his boss.
1 sift through 2 louse up
3 reel in 4 hinge on

Read each passage and choose the best word or phrase from among the four choices for each blank. Then, on your answer sheet, find the number of the question and mark your answer.

The Neanderthal Extinction

The extinction of Neanderthals, close relatives of modern humans, has long been attributed to climate change. Around 40,000 years ago, temperatures started dropping across Europe. As the theory goes, this forced both Neanderthals and their animal food sources southward to warmer regions. Neanderthals had relied on the concealment offered by the northern forests to stealthily approach large prey animals and spear or club them at close range. On the sparsely vegetated southern plains, however, this strategy was both hazardous and ineffectual, and they gradually succumbed to starvation. The (26) was therefore assumed to have caused Neanderthals to go extinct. Recent improvements in techniques for dating bones and artifacts, however, have revealed that Neanderthals were mostly gone by the time the cooling trend began, casting doubt on the climate change theory.

Early humans, it seems, are the most likely culprits in Neanderthals' disappearance. Recent research indicates they edged out Neanderthals largely thanks to (27). Professor Richard Horan of Michigan State University cites excavations of human and Neanderthal dwellings as evidence of "a fundamental difference in lifestyle." According to Horan, human habitations were partitioned for different functions, whereas those of Neanderthals were not. This is evidence that individual humans were devoting time and resources to tasks they excelled at, thereby increasing efficiency. Humans' tendency toward societal organization likely granted them an enormous competitive advantage as the two groups vied to acquire finite resources.

Furthermore, Neanderthals lived in scattered bands of just a few individuals and lacked the extended social networks that allowed humans to trade for distant resources and engage in other economic activities. Some researchers now say (28). The Neanderthal brain was about 10 percent larger than that of a modern human. Fossil evidence strongly suggests that the area of the brain responsible for processing visual stimuli was particularly large in Neanderthals, which would have allowed for optimal visual perception and therefore been advantageous when hunting in the dim light of the northern latitudes. As a consequence, however, less space was allocated to the brain's frontal lobe—the area responsible for social cognition. The resulting inferior social capacity would have severely reduced the species' ability to compete.

- (26) 1 decision to modify their diet
2 failure to adapt to new circumstances
3 decrease in animal populations
4 loss of plains in the south
- (27) 1 a lucky coincidence
2 being protected from the weather
3 their division of labor
4 their more aggressive nature
- (28) 1 this was not always the case
2 there was a clear reason for this
3 population sizes were not affected
4 Neanderthals engaged in trade as well

Marriage and Social Class

Daniel Schneider of the University of California, Berkeley, has been investigating the decline in marriage rates that has been occurring since the 1970s in the United States. Not only are the ranks of the unmarried growing, but marriage rates for those with lower education levels and those who lack wealth have undergone a dramatic plunge. Schneider worries that anything that makes disadvantaged people less likely to tie the knot also makes them less able to reap the social and economic benefits marriage has been shown to provide, and that they will face ever-increasing obstacles in their struggle to break the cycle of poverty. Data from the United States Census Bureau suggest that (29). Adults with a doctorate or master's degree are almost four times as likely to marry someone who also has one, and college graduates are twice as likely to marry another college graduate. Moreover, marriage rates for male high school dropouts are less than half those of male college graduates. In short, low-income individuals with lower education levels are marrying less, and there has been a decline in marriage across educational and class lines.

The latter trend has (30) college-educated people from lower-class backgrounds. Research by Cornell University sociologist Kelly Musick, who examined long-term data on 3,200 Americans from widely varying social backgrounds, indicates that college is advantageous in terms of raising individuals' earning potential, regardless of their socioeconomic background. There was also a high correlation between college attendance and heightened odds of getting married for people from the middle and upper classes. Statistics on individuals from lower-class backgrounds, however, indicated that college was an impediment to marriage, diminishing men's odds by 38 percent and women's by 22 percent. Musick attributes this to what she calls the "marriage market mismatch." On the one hand, people from lower-class backgrounds may be reluctant to "marry down" to a less educated partner from the same background, but on the other, their ability to find a partner with a similar level of education from a more privileged background may be impeded. According to Musick, therefore, although education can overcome income disparity among socioeconomic classes, other differences "may (31)."

- | | | | | |
|------|---|--|---|---------------------------------------|
| (29) | 1 | such concerns are valid | 2 | wealth is not an advantage |
| | 3 | this could easily be prevented | 4 | it is too early to be certain |
| (30) | 1 | created new opportunities for | 2 | led to higher marriage rates for |
| | 3 | made things difficult for | 4 | interfered with the working habits of |
| (31) | 1 | be advantageous to the lower classes | | |
| | 2 | continue to fade as time goes on | | |
| | 3 | persist in social and family relationships | | |
| | 4 | disappear in spite of education levels | | |

Read each passage and choose the best answer from among the four choices for each question. Then, on your answer sheet, find the number of the question and mark your answer.

The Origin of Paper Money

In the early eleventh century, the government of the Song dynasty of China began producing the world's first official paper currency. Like many great innovations, paper currency resulted from a complex chain of historical coincidences. Indispensable to its development was a conception of the fundamental nature of money that was in stark contrast to the one held in the West. European countries, believing that the worth of a currency should be based on the intrinsic value of the commodity it was made from, tended to employ gold- and silver-based currencies. The monetary system in China prior to the development of paper currency, however, utilized coins minted from low-value metals such as copper. Though not particularly rare, these metals had to be extracted from the ground and refined. By controlling the mining and minting processes, the government wielded enormous influence over the money supply. In the Chinese conception, money became worth what the state said it was worth, and was thus a tool the government could utilize to prevent severe fluctuations in the price and supply of commodities caused by surpluses or shortages of food, textiles, and other goods.

It was in this context that the world's first paper currency, called *jiaozi*, was initially developed as a private bill of exchange for goods in the early tenth century. The notes did not enter into broad use, however, until a peasant uprising broke out in the isolated province of Sichuan in the year 993; the rebels seized the capital city of Chengdu, which was a coin-producing hub for the region. Though the rebellion was put down within three years, the coin-producing mints remained closed for some time, and private merchants issued *jiaozi* as a stopgap measure. As the Song government began to reassert political and economic control after the rebellion, it designated 16 merchants as issuers of *jiaozi* and regulated the notes' appearance and production methods in order to increase their legitimacy. *Jiaozi* began to be used for trade between cities in the region, but this led to the proliferation of irresponsible issuers who failed to back their notes, and to a surge in counterfeit bills. The government therefore took over the administration of the notes, issuing the first official bills in 1023.

Though paper had become an accepted currency in Sichuan, *jiaozi* were still regarded as a mere supplement to coins. In the late eleventh century, however, landowners with large estates were evading their tax payments, and peasant farmers were being taxed disproportionately. To address this disparity, imperial counselor Wang Anshi instituted a number of economic reforms, including paying all government employees in cash and allowing peasants to pay their taxes with money rather than through unpaid labor or by giving up a share of their crops. The resulting demand for coinage outstripped the supply, prompting officials to greatly increase the distribution of paper money. Although inflation led to devaluation of the *jiaozi*, eventually causing it to be replaced by a new form of paper currency, Wang's radical social and economic ideas brought paper currency to prominence in Sichuan. From there, it spread throughout China, eventually reaching the West in the fourteenth century.

(32) Why did the Song dynasty government prefer to use low-value metals for its coins?

- 1 The relatively unsophisticated mining technology that was available in China at the time made it impossible to use precious metals as currency.
- 2 The ability to manage both the supply and value of its currency was an important tool that officials could utilize to help stabilize the economy.
- 3 Coins that were made of fairly common metals reflected the low values of the commodities the currency was generally used to purchase.
- 4 In order to counter Western influence on trade and economic exchange, the government chose to utilize a completely new form of currency.

(33) What is true of the currency known as *jiaozi*?

- 1 It was originally developed to address problems relating to the counterfeiting of coins among merchants in the city of Chengdu.
- 2 It resulted from an agreement between official mints and individual business owners who wanted to produce a single, standardized form of currency.
- 3 It was a cash alternative implemented by rebels who were seeking to damage the status of the metal coins being issued by the Song government.
- 4 It was used as a temporary solution to a local crisis in Sichuan and went on to become officially recognized and controlled by the government.

(34) One consequence of Wang Anshi's economic reforms was that

- 1 owners of large estates were required to begin paying their taxes in the form of paper money so that the state could increase its revenues.
- 2 officials began printing and distributing *jiaozi* to show wealthy landowners the government was committed to helping them maintain their status.
- 3 the most widely exchanged form of currency became harder to get, forcing people to utilize paper money on a far broader scale than ever before.
- 4 the government became aware that the widespread use of *jiaozi* had made business transactions more difficult to tax.

Arguing about Prohibition

In 1920, the US government adopted the Eighteenth Amendment to the Constitution, outlawing the manufacture, sale, and transport of intoxicating liquors. Many supporters of the constitutional ban, widely known as Prohibition, believed it would be permanent, but a mere 13 years later it became the first amendment ever to be repealed. In the ensuing years, Prohibition was vilified as a failed, unrealistic attempt by religious extremists to impose their values on the public. According to this view, Prohibition foundered because US citizens simply continued to drink as before, as consumption was driven underground. Meanwhile, the legitimate liquor industry was decimated, and illegal alcohol sales became a huge new source of income for organized-crime groups. Today, Prohibition has become a byword for the mistake of attempting to eliminate sin and vice through oppressive legislation, casting a shadow over later discussions of government social initiatives. Advocates of gun control are routinely compared to prohibitionists, and the tobacco industry is said to have benefited from the bad taste that Prohibition left in the public's mouth.

Historians such as Jack S. Blocker Jr. of the University of Western Ontario, however, argue that common perceptions of Prohibition arise from ignorance of historical facts. Blocker holds that Prohibition functioned as a public health initiative in a period before the emergence of modern civic health policies, and he maintains that the Eighteenth Amendment was a rational move that enjoyed widespread support. While admitting that the anti-alcohol movement originated in Protestant churches, he says its proponents came to place a greater emphasis on the medical and social dangers of alcohol consumption. In this, the movement gained backing from physicians and economists worried about the dramatic rise in alcohol consumption in the early 1900s. Moreover, Blocker offers data showing that Prohibition did in fact reduce drinking, and that rates did not return to pre-Prohibition levels until the 1960s.

Author Daniel Okrent offers an alternative view of Prohibition. Okrent says that an "unlikely coalition," which included anti-immigration activists and advocates of implementing an income tax, was responsible. At a time when millions of immigrants were flooding into the country, native-born, white Protestant Americans saw their political power diminishing and sought to weaken the political clout of saloon owners, who had enormous influence over immigrant voters. Fueled by anti-German propaganda during World War I, they also saw breweries, which were largely German-owned, as a menace to society. Prohibition became a stand-in issue that could be used to stem the rising tide of immigrants' political influence. Similarly, income-tax advocates seized on Prohibition as a means for depriving the government of a crucial revenue source. About half the federal government's revenue came from an excise tax on alcohol, and Prohibition would make the implementation of the first US income tax a necessity. Okrent argues that though many people who voted for Prohibition were drinkers themselves, they voted for it as a means to an end that was not what it appeared to be on the surface.

(35) According to the author of the passage, the view of the Eighteenth Amendment among modern Americans is that it

- 1 was initially a failure but had long-term positive effects on future generations' attitudes toward alcohol consumption.
- 2 clearly demonstrated the need for stricter legislation to prevent organized crime from spreading throughout society.
- 3 served to firmly establish the sale and manufacture of alcohol as a cornerstone of business in the United States.
- 4 contributed to making the public doubtful of government legislation aimed at correcting social problems.

(36) How does Jack S. Blocker Jr. characterize the twentieth-century Prohibition movement?

- 1 It evolved from a religious movement to one motivated by concerns about alcohol's effect on public health and social welfare.
- 2 Its supporters were motivated more by the damage that alcohol consumption was doing to the economy than by health concerns.
- 3 It gained popularity for its promised solution to the alcohol problem despite warnings from experts about the negative political consequences.
- 4 It reflected the general belief that prevention of illness has a more positive effect on the economy than medical treatment by physicians.

(37) Daniel Okrent believes the members of the "unlikely coalition" responsible for putting Prohibition into effect were

- 1 united in the belief that alcohol was such a threat to the US immigrant population that drastic measures were required to help them.
- 2 dominated by white Protestants who voted for the movement because they felt it was unethical that alcohol was not being taxed.
- 3 receiving funding from immigrant groups who brought ideas about the sinfulness of alcohol with them from their home countries.
- 4 taking advantage of the movement to further their own political agendas even though they did not necessarily believe in it.

Language and Thought

Does language shape the thought and worldview of its speakers, or is it human thought that determines language? Those debating the issue have long been divided into two camps: the “relativists” and the “universalists.” Relativists maintain that language influences thought, and that the nearly infinite grammatical and lexical differences between languages give rise to the multitude of worldviews possessed by humanity. Universalists, on the other hand, believe language is shaped by cognition, and that all languages share the same limited, universally available range of expression.

In the early twentieth century, as the field of linguistics was emerging, relativist thinkers such as Edward Sapir and Benjamin Lee Whorf held sway. “We see and hear and otherwise experience very largely as we do because the language habits of our community predispose certain choices of interpretation,” Sapir stated in his 1929

essay on language. Though intriguing, this theory had little empirical research to support it, and by the 1960s, universalism had begun to gain ground. In 1967, American scholar Noam Chomsky proposed his “Universal Grammar,” which revolutionized the study of linguistics. According to Chomsky’s theory, the human mind is hardwired to create speech, and as a result, all languages share certain traits and grammatical features.

In the following decades, the field of linguistics turned away from formal explorations of the linkages between culture and language in favor of in-depth analysis of the commonly held underlying linguistic structures proposed by Chomsky. Studies of color recognition in infants, for example, showed that even before they can speak, babies can perceive color categorically, suggesting that some sort of innate ability affecting perception of colors exists in the

brain, without any influence of learned language.

Other studies examining the way sign language is used also lent support to the idea of a universal capacity for grammatical organization. In one study, deaf children born to hearing parents who were unable to use sign language nonetheless began linking gestures together to communicate. Another study followed a deaf boy born to parents who were also deaf but who had not learned American Sign Language properly. Although he had no models for correct grammatical usage in American Sign Language, the child was nonetheless able to use grammar and complex sentence structures accurately. For example, the parents often used verbs of motion incorrectly, but the child signed them without mistakes nearly all the time. Cases like this gave many scientists cause to believe there were innate elements to language acquisition.

(38) What might a proponent of universalism say in response to Edward Sapir’s statement regarding language?

- 1 The idea that thought shapes language is difficult to believe because there are so many different types of languages in existence.
- 2 Worldviews are not determined by language, but rather language is determined by inherent characteristics of the human mind.
- 3 Thought processes are affected more by an individual’s unique speech pattern than by the community in which that individual grows up.
- 4 While the number of different worldviews is limited, there is no limit to the range of language that humans are capable of producing.

(39) What was suggested by the results of the study involving the deaf boy?

- 1 Children possess the capacity to use language with grammatical correctness regardless of whether they have been shown how to do so.
- 2 The degree to which a child will be able to acquire language can be predicted by the parents’ ability to use grammar correctly.
- 3 Children who can hear have difficulty learning sign language because of grammatical differences between signed languages and spoken languages.
- 4 A child’s ability to recognize colors is affected not only by the language the child has been taught but also by the words the child uses on a regular basis.

In recent years, however, relativism has begun to return to favor among linguists, due in part to increased access to speakers of little-known languages in remote areas. Cognitive scientist Lera Boroditsky of the University of California, San Diego, has surveyed thousands of speakers of several different languages to obtain empirical data on how language shapes cognition.

According to Boroditsky, speakers of an Australian Aboriginal language called Kuuk Thaayorre indicate location by using compass directions—north, south, northwest, etc.—rather than relative terms like left or right. To the question, “Where is the pen?” an English speaker standing on one side of a table would reply, “It’s to the left of the book,” but a speaker standing on the opposite side of the table would answer, “It’s to the right of the book.” Kuuk Thaayorre speakers, however, would say, “It’s southeast of the book,” no matter where they stood in the

room. This aspect of their language means Kuuk Thaayorre speakers must maintain constant awareness of their physical orientation and how it relates to their surroundings.

Another researcher, Daniel Everett, who spent decades in the Brazilian Amazon with a tribe of hunter-gatherers called the Pirahã, claims his experiences contradict Chomsky’s Universal Grammar. Everett posits that the culture of the Pirahã has imposed restrictions on their language, which in turn has limited their ability to grasp certain concepts. For example, the Pirahã are a hunter-gatherer society with an extremely present-focused worldview: they have no interest in the distant past or future. Consequently, they do not store food for future consumption, and as a result, their language contains hardly any words to express quantity. This in turn has limited tribe members’ ability to understand the concept of counting.

Everett believes their focus on the immediate present is reflected in their language, which has no verb conjugations for past or future tenses and contains few words relating to time.

A group of researchers led by Terry Regier of the University of California, Berkeley, having recently investigated the debate over language and thought in the context of color cognition, proposes that the division between universalism and relativism is a blurry one. They acknowledge that some aspects of language, such as distinguishing and naming colors, have universal tendencies; at the same time, they say language has an undeniable effect on perception. While they realize the debate is likely to continue, the researchers suggest the dichotomy between universal and relativist perspectives is only useful “as a means of starting, rather than pursuing, a conversation about language and thought.”

(40)

Which of the following points is made regarding speakers of certain little-known languages?

- 1 The emphasis on compass directions in the culture of Kuuk Thaayorre speakers has little to do with the influence of their language.
- 2 Pirahã tribe members would find it easier to grasp the concept of counting if they were instructed in their native language.
- 3 Speakers of Kuuk Thaayorre have strong directional skills as a result of certain characteristics of their language.
- 4 As Pirahã tribe members adapted to a more modern lifestyle, more concepts relating to time began to be reflected in their language.

(41)

What is the main point put forth by Terry Regier’s research team?

- 1 Color cognition is one of many areas in which there seems to be a clear winner in the debate between universalists and relativists.
- 2 The relationship between language and thought is too complex to be explained solely by either of the viewpoints of relativism or universalism.
- 3 Humans’ ability to distinguish and label colors has little to do with either acquired language or innate cognitive ability.
- 4 The universalist argument is superior in that it better explains the reason for tendencies found in most of the world’s languages.

4

English Composition

- Write an essay on the given TOPIC.
- Give **THREE** reasons to support your answer.
- Structure: introduction, main body, and conclusion
- Suggested length: 200–240 words
- Write your essay in the space provided on Side B of your answer sheet.
Any writing outside the space will not be graded.

TOPIC

Agree or disagree: World peace is an achievable goal

MEMO

Listening Test

There are four parts to this listening test.

Part 1	Dialogues: 1 question each	Multiple-choice
Part 2	Passages: 2 questions each	Multiple-choice
Part 3	Real-Life: 1 question each	Multiple-choice
Part 4	Interview: 2 questions	Multiple-choice

※ Listen carefully to the instructions.

Part 1

- No. 1**
- 1** Terry should discuss his problems with his teacher.
 - 2** Terry should spend less time studying vocabulary.
 - 3** Terry should use a different method to learn words.
 - 4** Terry should let her help him study for the test.
- No. 2**
- 1** He worked late the night before.
 - 2** He had an early morning meeting.
 - 3** He has been working alone too often.
 - 4** He did not finish the advertising contract.
- No. 3**
- 1** They like to take turns shopping.
 - 2** They prefer to stay at home on weekends.
 - 3** They enjoy doing activities separately.
 - 4** They do not enjoy each other's company.
- No. 4**
- 1** He goes there to talk with old friends.
 - 2** He enjoys taking his family there.
 - 3** He hopes to attend next year.
 - 4** He thinks there are too many spectators.

- No. 5**
- 1** The house is too big for them.
 - 2** The neighborhood is too crowded.
 - 3** The nearby station will be noisy.
 - 4** The rent will make it hard to save money.
- No. 6**
- 1** Cancel the appointment with Mr. Lloyd.
 - 2** Reschedule the appointment.
 - 3** Ask Monica to participate.
 - 4** Meet with Mr. Lloyd as planned.
- No. 7**
- 1** Delay her holiday by a month.
 - 2** Go away at the usual time.
 - 3** Go on vacation by herself.
 - 4** Visit job fairs around the country.
- No. 8**
- 1** The woman should have done her paper sooner.
 - 2** He does not have time to go to lunch.
 - 3** The woman should not go to Jim's party.
 - 4** He cannot meet the woman later.
- No. 9**
- 1** She is neglecting the students' needs.
 - 2** She ordered the wrong model of computer.
 - 3** She sometimes fails to consult others.
 - 4** She tends to ignore budget limitations.
- No. 10**
- 1** The women's input will be ignored.
 - 2** It will probably be the last one they have to complete.
 - 3** His boss wants to see it before human resources does.
 - 4** It could lead to changes in the workplace.

Listening Test

Part 2

- (A) No. 11
- 1 Few of them suffered from oral health problems.
 - 2 Most of them were not involved in agriculture.
 - 3 They had learned to store grain surpluses.
 - 4 Some of them could not digest certain proteins.

- No. 12
- 1 It helps control weed growth on farmland.
 - 2 It provides more energy than grains do.
 - 3 It can kill potentially harmful bacteria.
 - 4 It was used as a food preservative in ancient times.

-
- (B) No. 13
- 1 They are a threat to marine organisms.
 - 2 A chemical they release can help sustain life.
 - 3 They are not affected by volcanic activity.
 - 4 The energy they produce is used in photosynthesis.
