

2015年 第1回 実用英語技能検定
(日曜日実施)

1級

(配点は1問1点。筆記は[3]は1問2点、[4]は28点、リスニングPart 3, 4は1問2点で、合計113点満点。)

1	(1)	3	(11)	4	(21)	2
	(2)	4	(12)	1	(22)	1
	(3)	2	(13)	3	(23)	4
	(4)	4	(14)	2	(24)	1
	(5)	2	(15)	3	(25)	1
	(6)	2	(16)	4		
	(7)	3	(17)	3		
	(8)	3	(18)	2		
	(9)	1	(19)	4		
	(10)	2	(20)	1		

2	(26)	4
	(27)	1
	(28)	4
	(29)	3
	(30)	1
	(31)	4

3	(32)	4
	(33)	2
	(34)	3
	(35)	2
	(36)	1
	(37)	4
	(38)	1
	(39)	4
	(40)	3
	(41)	3

4	Cloning research can greatly benefit humankind. In particular, it could lead to technology that would increase the human life span and ensure a stable food supply, and it would also help save endangered species.
	In medicine, cloning technology could be used to grow stem cells which could then be grown into human organs, making the practice of organ donation unnecessary. Further, because the organs would be based on the recipient's DNA, there would be no fear of the body rejecting them. This technology could greatly extend the human life span.
	Cloning could also ensure a stable global food supply since stem cells can be used to produce synthetic meat. This would allow humans to obtain sufficient protein without slaughtering animals. Additionally, since the meat would not come from farms, there would be little chance of diseases such as mad cow disease being passed on to humans.
	Finally, cloning has the potential to save endangered animals. The breeding populations of numerous species have become too low to guarantee their survival. Cloning could increase their numbers and save them from extinction.
	Though care must be taken to ensure cloning is performed in a safe and ethical manner, its potential effects on medicine, the food supply, and endangered species make it an extremely promising technology.

1級リスニング

Part 1	No. 1	2	No. 6	4
	No. 2	4	No. 7	3
	No. 3	2	No. 8	1
	No. 4	1	No. 9	2
	No. 5	2	No. 10	1

Part 2	No. 11	4	No. 16	1
	No. 12	3	No. 17	4
	No. 13	2	No. 18	3
	No. 14	3	No. 19	4
	No. 15	4	No. 20	3

Part 3	No. 21	2
	No. 22	1
	No. 23	3
	No. 24	2
	No. 25	1

Part 4	No. 26	4
	No. 27	3
