1 次の (1) から (20) までの () に入れるのに最も適切なものを 1, 2, 3, 4 の中から一つ選び、その番号を解答用紙の所定欄にマークしなさい。

- (1) After hundreds of experiments and observations, Dr. Erickson was finally able to prove the scientific () that she had been working on for years.
1 phrase 2 fellow 3 theory 4 scene
- (2) A: Did you hear that Amy was made manager of the sales department?
B: Yes, but it's not (). She's only going to be the manager until Ben returns from the Boston office in December.
1 ancient 2 permanent 3 social 4 cultural
- (3) The Eiffel Tower is France's biggest tourist (). Every year it is visited by millions of people.
1 solution 2 suggestion
3 attraction 4 determination
- (4) The Olympic Games are always () live so that people can watch the events as they happen.
1 broadcast 2 overcome 3 listed 4 represented
- (5) A: Jason seemed really upset during Rachel's farewell party. I thought he was going to cry.
B: Yeah, I was surprised. He doesn't usually show his () so openly.
1 instruments 2 emotions 3 monuments 4 organizations
- (6) Two days after Jeff's car was stolen, the police called to tell him that it had been found. The thieves had () it in a field a few miles from town.
1 selected 2 abandoned 3 revealed 4 admitted

- (7) Keiko was surprised when her cat suddenly scratched her on the arm with its sharp ().
 1 claws 2 tail 3 horns 4 fur
- (8) Some experts say that parents today () their children by giving them anything they want.
 1 trade 2 encounter 3 conduct 4 spoil
- (9) Jane spent a long time hanging the picture in her room. She wanted to put it in () the right place.
 1 mostly 2 frequently
 3 immediately 4 exactly
- (10) The professor () Helen to continue studying law, but she knew that she did not want to be a lawyer, and so she decided to quit.
 1 urged 2 extended 3 praised 4 succeeded
- (11) In () of the beautiful sunny weather, John and I stayed in the house all day reading books.
 1 danger 2 place 3 front 4 spite
- (12) A: Alice promised to help me fix my bike, but I'm not sure she'll really do it.
 B: Oh, don't worry about Alice. She always ().
 1 opens her heart 2 changes her mind
 3 keeps her word 4 makes her way
- (13) When Carl went to Seattle on a business trip, he () a visit to his grandparents. He had not seen them for two years.
 1 caught 2 brought 3 paid 4 felt

- (14) When it () buying a used car, getting the advice of a good mechanic is very useful.
1 comes to 2 turns on 3 brings with 4 takes after
- (15) It took a long time for Henry to () the loss of his beloved dog, Milo.
1 pull off 2 tend to 3 carry on 4 get over
- (16) A: Jill's friend Graham always helps her whenever she has a problem.
B: She's lucky to have a friend she can ().
1 know of 2 long for 3 count on 4 back up
- (17) The special news report on TV warned residents of Springfield that a tiger was () in the area. It had escaped from the zoo early that morning.
1 at large 2 in tune 3 on duty 4 for fun
- (18) This CD player's sound quality is much better than () of many more expensive CD players.
1 this 2 that 3 these 4 which
- (19) Susan was late for Peter's party because she had trouble () his house. She had not been there before, and his directions were not very clear.
1 find 2 to find 3 found 4 finding
- (20) All of my friends listen to classical music, but () me, I prefer pop songs.
1 up to 2 on to 3 as for 4 in for

2

次の英文がそれぞれ完成した文章になるように、その文意にそって(21)から(25)までの1から5を並べ替えなさい。そして2番目と4番目にくる最も適切なものをつずつ選び、その番号を解答用紙の所定欄にマークしなさい。

- (21) A: I like working at the restaurant, but I don't want to be a waitress forever.
B: Well, () your job, Penny, what would you do instead?
1 to 2 if 3 you
4 quit 5 were
- (22) A: Excuse me. Would you be () me find my contact lens? I dropped it somewhere here on the sidewalk.
B: Of course, ma'am. Let me take a look.
1 as 2 to 3 so
4 kind 5 help
- (23) The teacher told the students that their history reports should be () long. He said that shorter reports would be given a lower grade.
1 words 2 not 3 3,000
4 than 5 less
- (24) Bill could not think what to paint for the art competition. Then a (). He decided to paint a picture of a local church.
1 him 2 idea 3 great
4 to 5 occurred
- (25) A: Honey, the department store is having a sale on watches. Do you need a new one?
B: No. I'll () watch for a bit longer. It still works fine.
1 do 2 old 3 with
4 make 5 my

3 次の英文 [A], [B] を読み、その文意にそって (26) から (33) までの ()
に入れるのに最も適切なものを 1, 2, 3, 4 の中から一つ選び、その番号を解答
用紙の所定欄にマークしなさい。

A Forest Partnership

During the 1980s and 1990s, large timber companies in California bought many of the state's forests to cut them down for wood. This led to what became known as the "timber wars," in which environmental groups fought to stop the timber companies. People who lived near the forests also worried about the damage that was being done. However, since many local residents depended on the timber companies for their jobs, they often (26) the environmental groups. Recently, though, some local environmentalists and people from timber companies have put aside their differences and started working together. They have formed a nonprofit organization called the Redwood Forest Foundation Inc. (RFFI) to buy a forest that has been damaged by logging and manage it for the good of local people.

In 2007, the RFFI bought 50,635 acres of the Usal Redwood Forest in northwest California for \$65 million. The deal was made possible by a loan from Bank of America that covered the entire sum. It is unusual for a bank to lend so much money to a nonprofit organization, but the bank made the loan as part of its new environmental policy. (27), it is allowing the RFFI a long period of time to pay back the money and will not charge as much interest as usual.

The RFFI plans to restore the Usal Redwood Forest to its natural state. For eight years, it will not cut down any trees. After that, logging will start again, but it will be strictly (28). One of the conditions of the loan from Bank of America was that no more than 3 percent of the forest can be used for logging in any year. This will provide employment for local people, and the income from the logging will help the RFFI repay the loan. Art Harwood, the president of the RFFI, believes that his group shows how loggers and environmentalists can (29) in a way that is to everybody's advantage.

Getting to Know Your Dog

When choosing a dog for a pet, some people want a pure breed, such as a poodle or a German shepherd. This kind of dog is usually raised by a breeder and can be very expensive. However, most people are quite happy with dogs that are a mixture of several breeds. In the United States, these mixed breeds are often available for free at animal-rescue centers.

For a long time, there was no easy way for owners of mixed breeds to learn about their dog's background. Recently, however, new methods for doing this have become available (30) scientists who have gathered DNA samples from different breeds. These methods help people identify the breeds that make up the previous generations of their dog's family. One test is so simple that it can be done without a visit to a veterinarian. Owners take a sample of their dog's DNA by rubbing the inside of its mouth with a soft brush. Then they send the sample to the testing company, and the results come back a month later. This \$65 test can compare the pet's DNA with the DNA of 38 major breeds. If owners pay a higher fee, they can have a more (31) test performed. This test, which is based on blood samples, can recognize 134 breeds and must be carried out by a specialist.

Most owners who try DNA testing do so because they are curious about their dog's background. The information can also (32) owners in another way. Some breeds are more likely to suffer from certain health problems. Knowing a dog's background can help owners and veterinarians make better healthcare choices. Although the new DNA tests are not cheap, the testing companies are (33) that they will be in demand. After all, they point out, many owners already spend hundreds of dollars on accessories for their dogs each month. Surely it would be worth paying a few more dollars to make sure their pets stay healthy.

4 次の英文 [A], [B], [C] の内容に関して, (34) から (45) までの質問に対して最も適切なもの, または文を完成させるのに最も適切なものを 1, 2, 3, 4 の中から一つ選び, その番号を解答用紙の所定欄にマークしなさい。

[A]

From: Melissa Wagner <mwagner@pvalleyfarm.com>
To: Hank Brown <hbrown@greenvillehigh.edu>
Date: October 19, 2008
Subject: Vegetables for Greenville High School

Dear Mr. Brown,

I run Peace Valley Farm in Greenville County. Ron Stern, your school's principal, suggested that I contact you. He told me that you became the cafeteria manager at Greenville High School last month, and that you are planning to introduce a policy of serving more fresh vegetables in the cafeteria. He mentioned that you are looking for a local farm to supply them. Would you consider Peace Valley Farm as a supplier? I feel sure that we can meet your needs. We produce a wide variety of vegetables on the farm, which we normally sell to stores in Greenville County. I understand that there are about 1,500 students at your school. Peace Valley Farm is fairly large, and I'm sure we could supply the amount of vegetables that you would require.

I have attached a document to this e-mail with more details about my farm. It includes information about our prices and what time of year different vegetables are available. Since our farm is so close to the school, the cost of transporting the vegetables would be very low. Because of this, I believe that we can offer vegetables at lower prices than other suppliers. Please feel free to contact me if you have any questions.

Yours sincerely,

Melissa Wagner

Peace Valley Farm

- (34) What is one thing that Ron Stern told Melissa Wagner?
- 1 He is planning to buy a farm in Greenville County.
 - 2 The school was looking for people to work in the cafeteria.
 - 3 Some of his students were hoping to work on a local farm.
 - 4 Mr. Brown wants to use more fresh vegetables in school meals.
- (35) Melissa Wagner says that Peace Valley Farm
- 1 would be a good place to discuss her ideas.
 - 2 plans to increase the variety of vegetables it grows.
 - 3 can produce enough vegetables to meet the school's needs.
 - 4 already supplies some schools in Greenville County.
- (36) According to Melissa Wagner, what is one advantage of choosing Peace Valley Farm?
- 1 Greenville High School's cafeteria will be able to save money.
 - 2 Students will be able to grow their own vegetables.
 - 3 The cafeteria will be able to make orders by e-mail.
 - 4 Mr. Brown will be able to transport the vegetables himself.

[B]

3-D Printing

Many people have had the experience of dropping a cell phone. If they need to replace a broken piece of the cover, they either have to call the manufacturer or visit the store where they bought the phone. But in a few years, people may turn to an invention that allows them to create their own replacement parts at home — the 3-D printer.

The most obvious difference between 3-D printers and traditional printers is that 3-D printers can produce three-dimensional objects. While traditional printers use paper and ink, 3-D printers reproduce objects using materials such as powdered nylon and aluminum. 3-D printers print out a series of thin layers. These layers are then joined together by heat and pressure to form a 3-D object. The design for the object can be downloaded from the manufacturer's website. Thus, rather than search for a replacement for a broken cell-phone cover, people would simply use the design to print out the object on their 3-D printer.

Industry has been making use of 3-D printers for years. Their most common use has been to make parts for cars, airplanes, and other products that are still being developed and tested. However, 3-D printers have recently been gaining popularity among designers and architects, who use them to create complex models of products and buildings. Doctors also rely on them to make realistic models of the human body to help them prepare for difficult operations.

The increasing popularity of 3-D printers is mainly due to reductions in price. Industrial 3-D printers used to cost as much as \$100,000 each, but companies are now developing smaller, more affordable 3-D printers for personal use. A U.S. company plans to sell 3-D printers to home users at a price of \$4,995. This will put the printer within the reach of many individual consumers. And as the price continues to fall, it may not be long before people are "printing out" toothbrushes, toys, drinking glasses, and other household items on their 3-D printer.

(37) In the near future,

- 1 stores will sell cell phones that work as printers.
- 2 printers may no longer have parts that can be broken.
- 3 people may have a new way of replacing broken parts.
- 4 manufacturers will give people a new cell phone when they visit.

(38) How does a 3-D printer work?

- 1 It prints layers of materials and shapes them into objects.
- 2 It creates designs for manufacturers to use when making parts.
- 3 It joins together sheets of paper with heat and pressure.
- 4 It produces a paper pattern and adds powdered nylon and aluminum.

(39) The use of 3-D printers

- 1 will probably be limited to testing products at manufacturing companies.
- 2 will become popular with people who want to build their own cars.
- 3 has helped doctors create new instruments to use in operations.
- 4 has spread to people who need three-dimensional models for their work.

(40) What has made it difficult for home users to get 3-D printers?

- 1 Companies were not willing to sell them for personal use.
- 2 The price has been too high for most consumers.
- 3 A number of safety problems must still be overcome.
- 4 The materials required for each object cost around \$5,000.

[C]

Threads of Hope

Spider silk — the threads that spiders produce to make their webs — is known for its amazing characteristics. It is five times stronger than steel of the same weight and does not break even when stretched to four times its original length. For these reasons, many scientists have recently been researching spider silk, and they have made a number of important discoveries. They now know, for instance, how a spider produces its silk and what chemicals the silk contains. Some scientists have even found a way to make spider silk artificially.

According to spider specialist Randolph V. Lewis, however, scientists have given little consideration to what may be the most important aspect of spider silk — its potential use in medicine. Lewis finds this surprising because, for hundreds of years, many cultures have told stories about the use of spider silk to stop bleeding and to cure wounds. Even William Shakespeare mentions the healing power of spider silk in one of his plays. Despite this, very little scientific research into the medical use of spider silk has been carried out.

Lewis points out one exception: a series of experiments concerning the reaction of the body's immune system to the silk. The immune system protects the body from disease by attacking the bacteria and viruses that enter the body from outside. This sort of protection is usually necessary, but sometimes it has negative effects. For example, doctors often perform operations to place implants, such as artificial knees, in patients' bodies. The immune system treats the implants as possible sources of danger, and this can cause the body to reject them after the operation.

Recent research has shown, however, that the immune systems of rats and pigs show no reaction to spider silk that has been inserted into their bodies. Lewis believes that it might be possible to do the same thing with humans. He says that by wrapping an implant in spider silk, the body may accept it without a negative response from the immune system. Lewis is sure that further research will help develop many other possible medical uses for this mysterious material.

(41) In recent years, scientists have

- 1 found out why some spiders produce stronger kinds of silk.
- 2 developed artificial spider silk that is made from steel.
- 3 learned what chemicals are in spider silk.
- 4 discovered that a spider's silk changes during its lifetime.

(42) Randolph V. Lewis thinks it is surprising that

- 1 people are not producing new plays about spider-silk medicines.
- 2 William Shakespeare was able to cure illnesses by using spider silk.
- 3 spiders can use their silk to heal themselves when they are injured.
- 4 scientists have paid little attention to the medical possibilities of spider silk.

(43) The body's immune system

- 1 produces chemicals similar to those in spider silk.
- 2 is responsible for problems after some implant operations.
- 3 can be successfully transferred into another patient's body.
- 4 can be improved by newly developed artificial chemicals.

(44) Lewis says that in the future it might be possible to

- 1 cover implants with spider silk to prevent rejection by the body.
- 2 find a way to cause the human immune system to react to spider silk.
- 3 show that human bodies contain a material similar to spider silk.
- 4 make a new type of silk that is safer than spider silk.

(45) Which of the following statements is true?

- 1 Doctors often use spider silk during operations.
- 2 Scientists have found a way to produce man-made spider silk.
- 3 Rats and pigs showed negative reactions to spider-silk medicines.
- 4 Lewis has written stories about how spiders are used to heal people.
