Image Problem

The small fish known as piranhas that live in South America generally have a very bad reputation. People think of them as aggressive and dangerous, and they are often shown attacking and eating people in novels and films. Historians say this (**26**) image began when Theodore Roosevelt, a president of the United States, visited Brazil in 1913. While he was there, local fishermen warned him not to go into a river because he might be attacked by piranhas. Roosevelt refused to believe their story. The fishermen then pushed an old cow into the river, and hundreds of piranhas attacked and ate it in a few minutes. Later, Roosevelt wrote about this incident in a book.

According to researchers who have studied piranhas, though, this frightening reputation is exaggerated. In fact, piranhas hardly ever attack people, and no case is known of them having killed a human being. They (**27**) eat only the bodies of fish and animals that have died, or they take small bites out of other fish. They will sometimes form a large group and attack another animal, but this happens only when they are extremely hungry.

What about the dramatic event that Roosevelt witnessed? Research has shown that this was actually (**28**) by Brazilians to make the piranhas seem dangerous. Weeks before Roosevelt's visit, the fishermen collected piranhas and kept them without any food in one part of the river. When they put the old cow in the river, the fish attacked it because they were starving. (**29**), there have been more reports of piranhas biting people in recent years. Experts believe this is because the piranhas have become used to fishermen throwing unwanted parts of fish into the rivers. When someone puts in a hand or foot, piranhas sometimes mistake this for the food they are waiting for.

London's Green Bridge

One of the most popular alternatives to using fossil fuels is solar energy. As concern about global warming grows and the cost of solar panels declines, more and more companies are starting to use solar energy for their buildings and factories. Recently, work has begun in London on converting an old train station into a new “green” building. The new station will get about half the energy it needs from solar panels. Many environmentalists have (**30**) the project. They say that it is a good example of an approach to energy suitable for the 21st century.

The station will use an old bridge—Blackfriars Railway Bridge, which crosses the River Thames—as part of its design. Platforms for passengers will be built along both sides of the bridge. A long roof will be built over the bridge with 4,400 solar panels on it, enough to produce about 900,000 kilowatt-hours of electricity a year. The use of solar energy will reduce the amount of carbon dioxide released into the air and also save on electricity costs. The station will be (**31**) for the environment in other ways, too. There will be a system to collect rainwater for use in the station, and special devices will reflect natural sunlight into the station.

The new design, however, raises one difficult issue. Blackfriars Railway Bridge was built about 140 years ago and has been (**32**) by the British government as a historic building. The new station, however, will completely change the way the bridge looks. This would not normally be allowed, but the government has given permission for the new project. Many people, though, are worried about placing modern technology, such as solar panels, on historic buildings. They say that there are other ways to save energy without changing the (**33**) of old buildings and other structures. The company responsible for building the new station, however, insists that today saving energy must be our first priority.

Subject: Hotel cleaning service

Dear Ms. Oates,

I am looking for a new cleaning service for my business, the Fairview Hotel. My friend Daniel Hartley said he has been using your company, Luckstone Cleaning, at his hotel for years, and he highly recommends it. My hotel currently uses a different company—Sparkle First—but I am not satisfied with their service. Guests have complained that their rooms were still dirty after the cleaners visited, so I am thinking about switching to your company, starting next month.

Cleaning at our hotel is managed by our chief housekeeper, Linda Clarke. We employ regular staff to clean the dining room, kitchen, and lobby. We only need your staff to work in the guest rooms. They would make beds, clean the bathrooms, and vacuum. In addition, we would want them to check that everything in the room is working. If the coffee maker is broken, for example, the cleaner should tell Ms. Clarke.

I would like to know how much your company charges for this type of service. Could you let me know by e-mail this week? After that, perhaps you could come to the hotel sometime next week so Ms. Clarke and I can tell you about our needs in detail. If we agree on a price, I would like to sign a contract and set up a cleaning schedule by the end of the month.

Yours sincerely,
Adam Taylor

- (34) What is one thing that Adam Taylor says about Sparkle First?
- 1 He has recommended the company's service to other hotels.
 - 2 Daniel Hartley wants the company to clean his hotel from next month.
 - 3 Ms. Oates should use the company to clean rooms at her office.
 - 4 Guests have said the company's staff did not clean their rooms properly.
- (35) What is one thing that Adam Taylor wants Luckstone Cleaning staff to do?
- 1 Take orders for coffee and other drinks from the guests.
 - 2 Repair any damaged items that they find in the guest rooms.
 - 3 Help the regular staff with cleaning the dining room, kitchen, and lobby.
 - 4 Let the chief housekeeper know if something in a guest room is not working.
- (36) What does Adam Taylor want Ms. Oates to do this week?
- 1 Tell him how much her company's service would cost.
 - 2 Meet him to sign a contract for cleaning services.
 - 3 Contact Ms. Clarke to find out about the hotel's requirements.
 - 4 E-mail him the details of the cleaning schedule for next month.

A New Trend in Volunteering

Voluntary Service Overseas (VSO) is the name of an organization that was founded in the United Kingdom in 1958. The original aim of VSO was to send British 18-year-olds abroad so that they could learn about the problems of people in poorer parts of the world. Over time, however, VSO's focus changed, and it began sending mostly older people with professional skills. Although these volunteers are not paid, VSO covers all their expenses, including travel. The organization gradually grew so large that it founded partner agencies in countries around the world.

Unlike some volunteer agencies, VSO accepts volunteers no matter what country they are from. This fact, combined with the existence of partner agencies in a number of developing countries, has given rise to a new phenomenon. When we think of volunteers, we normally imagine people from wealthy countries helping people in poorer countries. Increasingly, though, VSO is recruiting volunteers from one developing country and sending them to help in another. A doctor in India, for example, might be sent as a volunteer to look after sick people in an African country.

The most dramatic example of this is probably in the Philippines. Volunteers from developed countries regularly come to the Philippines to help with development projects. But since VSO Bahaginan, the Philippines' VSO partner organization, was founded in 1999, it has sent over 600 Filipino citizens to other developing countries to work on projects. Most of these volunteers are professionals between the ages of 35 and 45.

Naturally, many people find it strange that these volunteers go abroad instead of working to help people in their own country. According to Rachel Nalus Quintos, VSO Bahaginan's chief communications officer, sending Filipino volunteers abroad has two advantages. One is that they gain international experience that can then help them in their own careers. The other is that they often come back to the Philippines after their time abroad determined to do more to end poverty in their home country. In this sense, volunteering abroad has the effect of turning them into true global citizens.

(37) What is one thing we learn about VSO?

- 1 It grew larger by combining with other volunteer organizations.
- 2 It was created to give volunteers more professional experience.
- 3 It pays the transportation costs for volunteers to go to other countries.
- 4 It is the oldest volunteer organization in the United Kingdom.

(38) What is one thing that makes VSO different from some other volunteer organizations?

- 1 It does not form partnerships with other volunteer agencies.
- 2 It sends people of any nationality to help with projects.
- 3 It relies on money from both wealthy and developing countries.
- 4 It does not provide medical help to developing countries.

(39) VSO Bahaginan is an example of how

- 1 VSO volunteers today do not fit the pattern of VSO volunteers in the past.
- 2 a poorer country refused help from an international volunteer organization.
- 3 the Philippines receives more international volunteers than other areas in Asia.
- 4 many doctors are trying to focus more on public-health problems in Africa.

(40) What is one reason Rachel Nalus Quintos supports the activities of VSO Bahaginan?

- 1 It teaches people about the cultural traditions of the Philippines.
- 2 It helps the Philippines maintain peaceful relations with other countries.
- 3 It results in more efforts to help poor people in the Philippines.
- 4 It encourages more foreign volunteers to come to the Philippines.

A New Way to Wash

Until the invention of the modern washing machine, most people washed their clothes by hand. In the 20th century, however, washing machines became common, and washing clothes became much easier. Washing machines, though, have some serious disadvantages. One is that they need a great deal of clean water. Another is that, in many countries, hot water is used in the machines. This consumes a lot of energy. In the United Kingdom, for example, about one-third of household energy is used for heating water, including that used to wash clothes.

Now, a British company has invented a washing machine that solves these problems by using small plastic beads to absorb dirt and clean the clothes. First, a little water is added to the clothes to get them wet. Then, the beads are mixed with the clothes until they have taken away all the dirt and stains. When the process is over, the little beads are removed by the machine, and the clothes are left almost dry. Because the beads can be used over and over, the machine costs very little to operate.

The new machine is based on the research of Stephen Burkinshaw, a chemist at the University of Leeds in the U.K. For a long time, Burkinshaw has been studying ways to make plastic materials a different color. A few years ago, he noticed that many kinds of plastic, especially nylon, attract dirt from other objects. He found that although the nylon absorbs dirt in warm and wet conditions, the surface of the nylon remains clean. For this reason, beads made of nylon can be used repeatedly until they are completely full of dirt.

The new washing machine can save households a great deal of the money they spend on water and energy. At the same time, the machines are very good for the environment. The United States, for example, uses 1.25 billion metric tons of water on washing clothes every year. If the new machines were adopted there, 90 percent of this water could be saved. The saving of electricity, meanwhile, would help decrease the amount of carbon dioxide produced by power plants. For these reasons, the company is hoping that its new “waterless” washing machines will be widely used in the future.

(41) What is one problem with the washing machines used in many countries?

- 1 Many people do not have enough money to buy one.
- 2 They consume one-third of the water used in homes.
- 3 A lot of energy is required to heat the water they use.
- 4 They do not get clothes as clean as washing by hand.

(42) The small plastic beads used by the new washing machine

- 1 are separated from the clothes when the cleaning process has finished.
- 2 contain enough water and energy to wash the clothes.
- 3 stop the clothes from being damaged while they are being washed.
- 4 must be taken out to be cleaned each time the machine is used.

(43) What did Stephen Burkinshaw learn about nylon?

- 1 It absorbs dirt from other objects in certain conditions.
- 2 It causes other plastic objects to stick to wet clothes.
- 3 It can be made into clothes that can be washed very easily.
- 4 It changes color when it comes into contact with dirty clothes.

(44) What is one reason the new washing machines may be good for the environment?

- 1 People who use them would wash their clothes less often.
- 2 They could reduce the amount of carbon dioxide being released.
- 3 The plastic beads from them can be used for other purposes.
- 4 The water in them is recycled over and over until it is dirty.

(45) Which of the following statements is true?

- 1 Burkinshaw's research has already helped the United States to save a lot of water.
- 2 Burkinshaw's research was originally about ways to change the color of plastic materials.
- 3 The new machines can wash clothes more quickly than ordinary washing machines.
- 4 The new machines are better at washing nylon clothes than those made from other materials.
