The Mysteries of Amber

Amber is a beautiful, shiny, yellow stone, which has been used to make jewelry since ancient times. It is made of a substance called resin that comes from trees and has hardened over millions of years. In the 19th century, people began to (**21**). When they did so, they found that amber often contains fossils—the remains of ancient plants and animals. However, unlike normal fossils, which are hard and usually found in rock, amber is able to preserve soft materials, too.

Millions of years ago, leaves, insects, and small animals sometimes got trapped in resin. After the resin became hard, the object inside would be protected as a fossil. By examining these objects, scientists are able to study the blood and DNA of insects, frogs, and lizards that are now extinct. (**22**), small details, such as feathers and hair, are preserved in fossils in amber. This means that the colors and shapes of the actual animals can be observed in the fossils.

In 2015, Lida Xing, a Chinese scientist, found the tail of a small, 99-million-year-old dinosaur in amber. Small details, such as the bone structure, were kept in perfect condition. Besides this, Xing noticed that the tail had feathers. This animal had dark brown feathers on top of the tail and lighter feathers underneath. Based on the shape and size of these, Xing believes that this dinosaur (**23**). Instead, its feathers were for warmth and decoration. This is the first time this kind of information on ancient life has ever been found, proving how special amber really is.

Changing Slums

“Slum” is a word meaning an area of a city with low-quality housing that often lacks basic services, such as electricity and clean water. In developing countries, slums are created when large numbers of poor people move to cities in search of work. According to the United Nations (UN), about one in seven people in the world live in slums. City officials usually consider slums a problem, and the solution has been to try to get rid of them. Now, the UN is asking cities to (24). That is, they want cities to improve slums and make them part of the city, rather than destroy them.

Land ownership is one of the main issues the UN recommends solving. Many people living in slums do not actually own the land and house where they live. Even though their family built the home and lived there for many years, they usually do not have documents to show that it belongs to them. (25), the law cannot protect them if somebody tries to take their home. The UN recommends cities help people living in slums by providing them with documents showing that they own the land and their homes.

In addition, the UN says local governments should work to manage slums better. When slums are more organized, people create businesses, which leads to more jobs and more money. In the Dharavi slum in Mumbai, India, small businesses owned by local residents add about \$1 billion to the local economy each year. This suggests that cities do not need to get rid of slums. Instead, slums can (26).

From: Pete Merrick <pete.merrick@greenzine.org>
 To: Wendy Hensley <w-hensley2@imail.com>
 Date: May 31
 Subject: Volunteer writing

Dear Ms. Hensley,
 Thanks for your interest in writing for our magazine, *Greenzine*. As you know, *Greenzine* is an online magazine that publishes articles about the environment. It's a nonprofit magazine, so we offer all of our material to readers for free every month. Because of this, we ask volunteers to write all our articles instead of hiring paid writers.

You said in your e-mail that you'd like to write for us because you're interested in the environment and want to get some writing experience. Becoming a volunteer writer is a great way for a college student like yourself to improve your skills! We're happy to have young writers who have a passion for saving the earth. We'd like to give you a chance to write for us, and we were wondering if you could write an article for the next issue.

Right now, we're looking for someone to review new "green" products that are supposed to be better for the environment. I've attached a list of these products to this e-mail along with an application form. Please choose one to write about, send in the application form, and then, we'll send you a free sample. Once you've written your article, please e-mail it to me by June 25, and I'll have a look at it.

Sincerely,
 Pete Merrick
 Managing Editor, *Greenzine*

(27) What is true about *Greenzine*?

- 1 Its writers volunteer to help clean the environment each month.
- 2 Its readers pay to read its articles that are not on the Internet.
- 3 It is sent to readers in the mail once a month.
- 4 It does not pay its writers any money.

(28) Why does Ms. Hensley want to write for *Greenzine*?

- 1 She needs to write articles for a college class.
- 2 She wants to get some practical writing skills.
- 3 She hopes to get a free copy of the magazine.
- 4 She saw an interesting article in it last month.

(29) Pete Merrick asks Ms. Hensley to

- 1 fill out the online writer's application form by June 25.
- 2 make a list of products that are good for the environment.
- 3 write a review of his magazine and recommend it to others.
- 4 pick a product to write about for *Greenzine*'s next issue.

Metal Foam

When we think about dangers to our health, we usually think of dangerous diseases. However, one of the leading causes of death around the world is traffic accidents. In fact, traffic accidents are the biggest cause of death for people aged 15 to 29. Furthermore, not only do 1.2 million people die in such accidents every year, but 20 to 50 million people are also injured. While some wealthy countries have reduced the number of traffic accidents in recent years, they are increasing rapidly in developing countries.

One way to deal with this problem is to make cars that are better able to protect the people inside them during accidents. For many years, researchers have been interested in using metal foam to do this. Metal foam refers to a metal, usually steel or aluminum, which has had bubbles of air or another gas inserted into it. Usually the metal foam is between 75 to 95 percent air. This makes it very light compared to ordinary metal. Metal foams have been created for some time, but most of them have been very weak. This has made it difficult to use them in vehicles.

Afsaneh Rabiei, a scientist at North Carolina State University in the United States, has developed a new metal foam. Rabiei spent five years developing it. According to her, the problem with earlier metal foams was that the bubbles were various sizes. In the new metal foam, though, the bubbles are regular in size. This results in a much stronger metal foam.

Tests carried out by Rabiei show that the new material is five to six times stronger than other metal foams, and also greatly decreases the damage that occurs in a crash. This means that, if it were to be used to build cars, it would be much better than ordinary metals at protecting drivers and passengers. Rabiei believes that the new metal foam could also be used in boats and airplanes, as well as to help protect buildings against earthquakes.

(30)

Traffic accidents are

- 1 leading to more people having dangerous diseases.
 - 2 the main cause of death for people of all ages in wealthy countries.
 - 3 becoming more and more of a problem in developing countries.
 - 4 usually caused by drivers who are between the ages of 15 and 29.
-

(31)

What is one problem with most types of metal foam?

- 1 They are not strong enough to improve the safety of cars.
 - 2 They are made of aluminum which is too light to use in cars.
 - 3 The steel that is used to make them is not filled with enough bubbles.
 - 4 The air inside them causes environmental damage when it is released.
-

(32)

What has Afsaneh Rabiei developed?

- 1 A way to release the unnecessary bubbles from metal foam.
 - 2 A type of metal foam in which each of the bubbles is the same size.
 - 3 A stronger type of metal that can be used to create better metal foam.
 - 4 A quicker way to produce the metal that is used to create metal foam.
-

(33)

What is one possible benefit of Rabiei's new material?

- 1 It can reduce the damage and injuries that result from car crashes.
- 2 It can be used to prevent a large number of earthquakes.
- 3 It may allow companies to build cars that are five to six times cheaper.
- 4 It may decrease the number of boat and airplane accidents that occur.

Counting Every Citizen

In recent decades, India has been experiencing very rapid economic growth. Yet, while the country as a whole has grown much wealthier, it still has more poor people than any other country in the world. It is difficult to say exactly how many poor people there are in India, but many experts agree that around a third of the population suffers from poverty. Although the Indian government has many programs designed to help these people, many people still do not receive the financial support they need. The national government believes one reason is that local officials sometimes steal this money.

In order to solve this problem, the national government started a program in 2010 with the aim of using new technology to help the poor. This program is known as the Unique Identification Authority of India (UIDAI). This is a project to record the identity of every Indian individual in a huge government database. The government records the name, date of birth, address, and fingerprints of each person. Each person is then given a number. By 2018, 93 percent of the population had been recorded in this way.

It is hoped that the UIDAI will allow individuals to deal directly with the national government rather than going through local officials. For example, the government gives money to people with less than a certain income. This money is now paid directly into individuals' bank accounts, rather than through local offices. The system also allows people to prove who they are, so they are able to obtain education, drivers' licenses, and other government services.

Not everybody, though, thinks that the new system is a success. While some government officials argue that it provides a model for other developing countries that want to help the poor, some people point to problems. For example, if a mistake is made when recording the details of an individual, it is extremely difficult to get it corrected and people will be unable to access government services. In addition, some machines designed to check the identity of individuals do not work properly. However, the Indian government is confident that it will solve these problems before long, and the UIDAI will be a success.

(34)

Nowadays in India,

- 1** a third of the population suffers from diseases that cannot be cured easily.
- 2** experts have become concerned about the increasing number of wealthy people.
- 3** the number of people living in poverty is still high despite economic progress.
- 4** local officials have started stealing money in order to help poor people in their area.

(35)

What is the purpose of the Unique Identification Authority of India (UIDAI)?

- 1** It supports businesses that are trying to create databases.
- 2** It gathers basic data about all the citizens of the country.
- 3** It helps poor people gain access to new types of technology.
- 4** It collects the fingerprints of people who have committed crimes.

(36)

What is one benefit of the UIDAI program?

- 1** Poor Indians can receive money directly from the national government.
- 2** Local governments are able to decide how money in their regions is spent.
- 3** It makes it easier for poor Indians to find new jobs in local areas.
- 4** It helps people pay the fees that are needed for their children's education.

(37)

One concern people have about the UIDAI is that

- 1** too much money was spent purchasing the high-quality machines used for the project.
- 2** the new system is working very differently from the original model for the program.
- 3** it can cause difficult problems if incorrect information is accidentally recorded.
- 4** it would be too challenging to set up a similar program in developing countries.

(38)

Which of the following statements is true?

- 1** The UIDAI helps people show who they are in order to access government services.
- 2** There are fewer poor people in India than in other developing countries.
- 3** Around 93 percent of the Indian population does not know their date of birth.
- 4** The government is worried that the UIDAI will not be as successful as it expected.

- ・日程区分については、英検ウェブサイトの【二次試験のA／B日程の区分けについて】をご確認ください。
- ・ダブル受験（隣接した2つの級を一緒に受験）の場合、それぞれの級について二次受験票に記載の日程での受験となり、級により異なる日程での受験となる場合があります。
- ・年齢は申込時に申請した生年月日に基づいて算出します（一次試験の答案に異なる生年月日を記入されても反映されません）。
- ・申込情報に不備がある場合、協会が指定した日時での受験となり、【二次試験のA／B日程の区分けについて】のとおり日程とならない場合があります。
- ・一部特別会場（海外・離島等）、障がい者特別措置にて二次試験を受験する場合についてはA日程とします。

2) 受験地（希望の受験地を選べます）

- ・下記の二次試験受験地番号表をみて、希望の受験地番号を解答用紙（準会場で受験している場合は志願票）の所定欄に記入・マークしてください。
